NUTRITION FOR HYROX TRAINING AND RACE DAY: FUELING FOR PERFORMANCE

By Mark Cox | Stronghold Wellness

Hyrox is more than just a race—it's a test of your endurance, strength, and fueling strategy. Whether you're chasing a personal best or taking on your first event, nutrition plays a critical role in training adaptation, energy output, and recovery.

Often, athletes focus more on the workouts and will put in an immense amount of work, but fall flat late in a race. Nutrition might be the way to unlock a new level of training and racing. This guide walks you through training and racing nutrition strategy to help maximize the work you've put in.

WHY HYROX DEMANDS A HYBRID NUTRITION STRATEGY

Each Hyrox race features 8 x 1km runs with functional fitness stations like sled pushes, burpee broad jumps, and wall balls. You need:

- Carbs for endurance
- Protein for muscle repair
- Fats for hormone balance
- Electrolytes for fluid balance and focus

DAILY TRAINING NUTRITION FOR HYROX ATHLETES

SUGGESTED DAILY MACRONUTRIENTS (THIS IS FOR ME BEING A 40 YEAR OLD, 205 LB ATHLETE, ADJUST FOR YOURSELF BASED ON VOLUME AND INTENSITY):

[Coaching](#) [Blog](#) [Contact Us](#)

Protein 200–250g

- Carbohydrates: 350–500g depending on session volume
- Fats: 60-100g
- Calories: 2,740-3,900

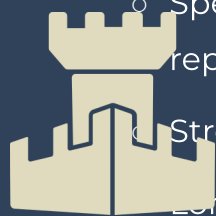

Most days end up about 3,300 calories for me, but long efforts require calories so it will creep above 4,000 on big days. This type of macro breakdown is to be used during training blocks. If you are in the 'offseason', you may not need this much. Typically I won't adjust protein much, but I will bring down carbs the most in offseason. We don't want to go into calorie deficits so the focus is on maintaining weight, which can be challenging given the volume when you are like me and live a gluten and dairy free lifestyle.

TIMING YOUR FUEL: PRE/POST-WORKOUT

- 90 - 120 mins before training: 30–60g carbs + 30-40g protein (lean)
- 15 - 30 mins before training: 30-60g carbs and electrolytes
- Post-workout window (30–60 mins): Protein + carbs (e.g., plant-based protein shake and banana)
- Hydration: Half your body weight in ounces daily + electrolytes (especially during long efforts or in hot/humid weather)
- Protein Intake: Protein intake is best if its spread somewhat evenly through out the day. For me an ideal day would be 50g at each breakfast, lunch, and dinner, plus two snacks during the day with at least 25g. Sometime the snack is a post workout shake or bar ([here](#) are the ones - super clean). This gets to my 200g goal and helps with absorption since its spread over the day.

WEEKLY FUEL STRATEGY FOR HYROX TRAINING

Select "Accept all" to agree to our use of cookies and similar technologies to enhance your browsing experience, security, analytics and customization. Select "Manage cookies" to make more choices or opt out.

◦ Speed/Intervals / Carbs before/during/after + protein after for glycogen & repair + hydration

◦ Coaching / Blog / Contact Us
◦ Strength Days / Protein focus

◦ Long Runs / Moderate carb intake pre/post + hydration

◦ Zone 2 Cardio / Low to Moderate carbs + fats

◦ Hyrox-Specific Circuits / High carbs before/during/after + hydration

SUPPLEMENTS TO CONSIDER (ALL CLEAN OR THIRD PARTY TESTED)

Here are the supplements that I use myself to fuel my training (some links below may produce commissions if an item is purchased through the link):

- Creatine Monohydrate: 5-10g daily for strength and recovery
 - [Momentous Creatine](#)
 - [BPN Creatine](#)
- Aminos: Essential Aminos
 - [Kion Aminos](#)
- Electrolytes: Crucial during intense sessions or warm climates
 - [ATH Sport](#) - They use Himalayan pink salt
- Carb Powder: Pre-workout for most days
 - [BPN G1M Sport](#) includes electrolytes and carbs
- Gel: Carb gel for hard efforts when I need intra-workout.
 - [BPN Go Gel](#) - Solid ingredients and easy on the stomach
- Plant-Based or Goat Whey Protein: For those avoiding dairy
 - [Momentous Plant Based Protein](#) - Delicious!
 - [Crucial Four Goat Whey \(A2\) Protein with Collagen](#) - use code: STRONGHOLD at checkout for a discount.

- Carb load 48–72 hours prior (clean, low-fiber carbs). Increase carbs by 100-250g per day for at least one - two days before.
- Hydrate aggressively with electrolytes
- Eat meals consistent to avoid GI distress. Don't try that new restaurant the week of a race!

RACE DAY SCHEDULE EXAMPLE (FOR NOON START):

- 7:30AM: Sweet potatoes + coconut yogurt + plant based protein + honey
- 10:30AM: Banana + electrolyte drink + coffee
- 11:15 AM: One scoop BPN G1M Sport+ and one scoop of BPN G1M Sport
- 11:50 AM: BPN Caffeinated Go-Gel
- During Race: Carry another Go-Gel and soft flask with electrolytes. Sip water/electrolytes if >75 minutes or hot conditions

KEY TAKEAWAY: NUTRITION IS YOUR 9TH STATION

Hyrox rewards athletes who can stay strong from station one to the final wall ball. Your training volume, intensity, and race-day effort all depend on how well you fuel your body.

Want a custom meal plan that fits your training cycle, goals, and dietary needs? Let's talk. Check out more about our nutrition coaching [here](#) and our Hyrox training [here](#). Most clients like to combine both to achieve their goals.
